Choose subjects that are relevant to your facility

## CAREER PROGRESSION OPPORTUNITIES

Animal technology is a diverse industry with many career opportunities

ASTS was developed to meet a gap in current training opportunities for technicians where there is often a limited number of units on offer by larger organisations. We offer a range of courses that encourage career progression starting from the Certificate III, onto the Diploma and then the Advanced Diploma of Laboratory Operations for those who want to gain a higher qualification for the management skills.

Some of the units ASTS offers:

- ALL ACMSPE units
- Conduct euthanasia of research animals
- Record and present data
- Maintain the laboratory/field workplace fit for purpose
- Perform basic tests
- Prepare working solutions
- Perform microscopic examination
- Ethics
- Operate specialized machinery and equipment
- Manage a small team
- Organize workplace information
- Design Simple Projects
- Identify and Respond to Animal Behaviour
- Provide Specific Animal Care Advice

## VARIETY OF SKILLS

With our suite of electives, students can cover units from a variety of training packages:

ACM10 Animal Care and Management Training Package

MSL Laboratory Operations training package

BSB Business Services Training Package

SIR Retail Services Training Package

## flexible solutions for your business needs

### Technician training

We offer three courses relevant to the animal technology field:

**ACM30219 Certificate III in Animal Technology**

**ACM50119 Diploma of Animal Technology**

**MSL60118 Advanced Diploma of Laboratory Operations**

The opportunity to train your staff in the skills you require for your facility.

### Skills assessment for researchers

Ethics requires researchers to be competent in their handling of animals.

A third party assessing researchers' skills reduces the risk of "conflict of interest" for in house trainers.

Skills assessment can also be aligned with units from nationally accredited courses meaning there is uniformity in their skills and knowledge and certification.

### Tailored short courses

Managers and Supervisors are often time poor so why not let ASTS design resources for your facility?

We can assist with designing resources for all areas of your facility or training programs:

- Inductions
- Euthanasia
- Behaviour
- Species specific manuals
- Non-surgical techniques
- Anaesthesia
